Friday, May 23 - Holiday

New Plant! Mackenzie Miller, NTE Energy Senior Project Engineer, explains the design of the Pecan Creek Energy Center to the Blackwell City Council Monday, May 12, 2014.

New Electric Plant to be constructed north of Blackwell

NTE Energy is in the process of developing Pecan Creek Energy Center, a new energy plant, nine miles north of Blackwell on Highway 70. This company will also operate the plant following construction. The plant will be a 200-300 MW natural gas electric generating facility. The project will be one of the most reliable and clean sources of capacity and energy in ERCOT, the independent system operator. Employing Mitsubishi advanced turbine technology in a simple cycle configuration, the plant will operate as a peaking unit to provide backup power for local wind generation providing stability for the electric grid. The company plans to begin 18 months of construction the end of this year and be online by

the spring of 2016. From approximately 100 employees during the construction phase, the workforce will drop to between 10 and 15 employees once it reaches the operation phase. During the question and answer session following a presentation Monday, May 12,

2014, by the project's Senior Engineer MacKenzie Miller to the Blackwell City Council, NTE's Director of Development, Tim Eves, assured the council that only minimal water would be needed during construction and operation – for drinking and restroom use.
